19. Not suitable for cabriolet, convertible designs.
20. Mounting instructions for W201/202/123/124/126: Max. lowering is obtained by using single points (single stud) spring rubber bases on the front and rear axles.
In case, the 3 point or 4 point rubber bases installed by the manufacturer have to be exchanged accordingly (spare part available from DB agents) in case of corresponding accessories, as automatic shifting, air conditioning etc. However on the front the 3 point or 4point rubber bases must always be used in case of trailer operation (trailer coupling) on the rear axle, 3 point rubber basses must always be used.
36. Not suitable for cars with Full Options.
37. Only for cars with Full Options.
44. For cars with standard lowering, the indicated lowering will be reduced with the amount of the standard lowering.

86. About 15mm less lowering for vehicles with sportsuspension.
89. Cut off 2 rings from the bottomside of the front bumpstops for extra lowering at the front
90. Note suitable for 2WD (Two-Wheel Drive) cars

INFORMATION

ESSEMBLY

We recommend to have the installation of our lowering springs done by a specialist workshop having the experts and special tools. Prior to assembly, it is absolutely necessary to read the TUV expertise comparing it with the data of the car and the delivered chassis part in order to exclude future assembly and technical problems concerning the TUV.

BRAKE POWER REGULATOR

In the case of cars which are equipped with load-dependent brake power regulator on the rear axle, we recommend to check this regulator and in case, to have it re-adjusted by your specialist workshop.

ABS

In case of cars with anti-blocking system, the sensors have to be accurately re-adjusted after mounting our lowering springs.

LEVEL ADJUSTEMENT

For cars equipped with level adjustment, it must be re-adjusted after mounting our lowering springs.

WHEEL ADJUSTEMENT

After mounting our lowering springs, the wheel adjustment values have to be checked.

MEASURING METHOD

The lowering indicated by us results from the difference between the standard ride-height (distance between fender and the center of the wheel) and the ride-height after lowering. You should take into consideration that in case of lowering carried out by the factory, the dimensions are reduced by this lowerage.
